### Algorithm Corman Solution

Algorithm design refers to a method or a mathematical process for problem-solving and engineering algorithms. The design of algorithms is part of many solution theories of operation research, such as dynamic programming and divide-and-conquer. Techniques for designing and implementing algorithm designs are also called algorithm design patterns, with examples including the template method ...

### Algorithm - Wikipedia

The above algorithm divides the problem into a number of subproblems recursively, each subproblem being of size  $n/b$ . Its solution tree has a node for each recursive call, with the children of that node being the other calls made from that call. The leaves of the tree are the base cases of the recursion, the subproblems (of size less than  $k$ ) that do not recurse.
