Dna Research Papers Full Text - shiftmanager.com

When Pauling sent a paper to be published in early 1953 that proposed a three-stranded DNA structure, the head of the Cavendish gave Watson and Crick permission to work full-time on DNA's structure.

Annotated version of Watson and Crick paper

DNA has a 'double helix' structure. Much like a spiral staircase, it has two single strands that join and twist together. The 'steps' of the staircase are made up of the four bases of DNA (adenine, cytosine, guanine and thymine). These bind together in complementary pairs (A with T, C with G). Age: 10 years + (KS2 +)

Origami DNA | Activities | yourgenome.org

DNA fingerprinting is a method for identifying and assessing the genetic information of DNA in a living thing's cell. DNA is called a fingerprint because of the improbability that two people will have similar DNA characteristics in the same manner that no people can have identical fingerprints.
