magnetic resonance angiography (MRA), a powerful magnetic field, radio frequency waves and a computer are used to evaluate blood vessels and help identify abnormalities. This exam, like all MR-based exams, does not use radiation. An MRA exam may or may not use contrast material.

angiography—also called a magnetic resonance angiogram or MRA—is a type of MRI that looks specifically at the body's blood vessels. Unlike a traditional angiogram, which requires inserting a catheter into the body, magnetic resonance angiography is a far less invasive and less painful test.

Magnetic Resonance Angiography is a minimally invasive medical test that uses a powerful magnetic field; thereby helping physicians diagnose medical conditions. An angiogram uses imaging methods and, in some cases, a contrast material to produce pictures of major blood vessels throughout the body. MRA does not use x-
