How the Netherlands Feeds the World - Magazine

By 2050 it's estimated there'll be over 6.5 billion people living in urban spaces, and vertical farming could play a growing role in feeding them. The farms use far less space, water and transport...

Vertical farming: a future way to feed urban populations?

Vertical farming is the practice of growing crops in vertically stacked layers. It often incorporates controlled-environment agriculture, which aims to optimize plant growth, and soilless farming techniques such as hydroponics, aquaponics, and aeroponics. Some common choices of structures to house vertical farming systems include buildings, shipping containers, tunnels, and abandoned mine shafts.
